DESCRIPTION
The operator simply opens up and squares a flat box, loads it into the pack station, uses the kick plate to fold minor flap and activate the bottom flap folder. The operator then presses the green switch and 2 of the bottom flaps are opened allowing for the next box to be fed into the machine. The operator then fills the box, and when once filled, the operator closes the minor and major flaps and pushes the box into the carton sealer.

FEATURES
- Saves time and labor costs to close bottom flaps before loading
- Folding size:
  - L 250-500mm (10-20")
  - W 200-400mm (8-16")
